Abstract

Biometrology is currently rapidly evolving part of metrology. The need of accurate and standardized measurements is urgent in various fields of biology, especially in laboratory diagnostic in healthcare and in the pharmaceutical industry. Many of the metrological institutes worldwide are trying to achieve the similar results through pilot studies and key comparisons focused on metrology of nucleic acids and proteins, however the variability of living world is still a few steps ahead this attempts.

Keywords: Biometrology, nucleic acids, proteins
